Subject:	Add Current and All Revisions Deletion of Images		
Description			
<p>ODE currently allows project managers to delete images from wiki docs. The problem is that this deletes the images for all previous revisions of the doc, and not just the current revision. This makes the creation of versioning schemes which link back to older revisions ineffective because some of the original content is lost. Managers do still need the ability to permanently and completely delete offensive images that have been posted to the wiki though. Because of this, ODE needs two types of image deletion. The first could be called "Delete In This Revision", which only deletes the image for the current revision. The other type of deletion could be called "Delete In All Revisions", which would purge the image from the wiki history completely.</p>
