| <b>Subject:</b>  | Preview and Edit Capability for News Comments |                  |     |
| <b>Description</b>   |   |                  |     |
| <p>When posting a comment to a News item, there is no option to preview what you've written. There is also no edit feature available for comments after you post them. You have to delete the comment and then re-post it. When using the News feature as a Developer Log it makes things cumbersome. I wonder if we're getting to a point where we need a Dev Log module that would incorporate these things instead of using the News module. It was never intended for what we're using it for.</p> |   |                  |     |

### History
