<b>Subject:</b>	Shipper tracking wiki macro		
<b>Description</b>			
Would like to integrate shipping trackers into issues/wikis/etc so team members can easily track parts shipped between sites. Note, the macro should show the tracking details in the issue/wiki page, but strip out the addresses of the shipper and receiver to protect privacy. May also look at going beyond a wiki macro and making an issue type of "ship part" which auto closes when the shipment is delivered by shipping company.
