Subject:	Social networking sites support		
Description			
Auto-share buttons for social network sites from project pages (to share on reddit, twitter, etc). Are there other related features?

Thingyverse has something like this under "share" on individual thing pages. There is a facebook like plugin for Redmine which may be useful, but it looks very immature (v0.1.1). Could extend it to support other services (twitter, pinterest, reddit, g+?). For just basic functionality (implementation as just links to services' APIs) should be pretty easy. Going to aim at this first.
